

Figure S3. IgG responses against YeO9_52212 LPS. IgG titres against 52212 LPS were measured in the sera of PBS-, C-OPS_{Ba}- and C-OPS_{Ba}+Al-vaccinated mice after three immunizations. Each value represents the mean \pm standard deviation of log₂-transformed titres in the sera of individual mice (shown as points) from each group. The unpaired t-test was used to evaluate differences between IgG titres (****, $P < 0.0001$; ns, no statistically significant difference).
