

Table S3. Association between HPV16 infection and smoking years among women referred to colposcopy in Finland.

| Recorded risk factors | | HPV16 vs. low-risk HPV/HPV-negative | | | |
|--|------|-------------------------------------|------------------------|-----------------|------------------------|
| OR (95% CI) | | <30y | 30-44y | ≥45y | All women |
| Smoking years | | | | | |
| | No | 1.00 | 1.00 | 1.00 | 1.00 |
| | <11y | 2.60(1.24-5.44) | 2.91(1.51-5.59) | 2.08(0.73-5.89) | 2.92(1.90-4.49) |
| | ≥11y | 8.42(1.00-70.64) | 2.77(1.46-5.25) | 0.84(0.30-2.37) | 1.84(1.16-2.91) |
| Smoking years where analysed in all women and in age groups of: <30, 30-44 and ≥45 years old. | | | | | |
