

Supplementary Table S1. Quantity of each antimicrobial that was used for dairy calves. Antimicrobial usage were expressed in used daily doses (UDD). The mean of the AMU for each antimicrobial was the simple arithmetic mean of the AMU for each antimicrobial (2.5%–97.5% quantile in brackets). There were 1 study in Canada, 2 studies in Ireland and 2 studies in Sweden.

Supplementary Table S2. Antimicrobial resistance of bacteria associated with calf pneumonia. The number of resistant isolates divided by the total number of isolates and the corresponding 2.5%–97.5% quantile were provided in brackets. Study on *Pasteruella spp.* was in Spain and *Mannheimia spp.* in Belgium, respectively. Critically important antimicrobials (according to WHO) with the highest priority were in bold and italic.
