

Supplementary Tables

Descriptive statistics for Para athletes separated by grade for impairment and performance measurements.

Table S1. Average scores for Para athletes by grade and non-disabled athletes by level. Function In Sitting Test (FIST), Scale and Assessment of Rating for Ataxia (SARA), Trunk Impairment Scale (TIS), and Re-Modified Ashworth Scale (R-MAS). Peak handheld dynamometry measures (N) for the trunk are presented. Note: %COV for SARA and R-MAS were calculated by dividing the SD by the difference between the mean score and total available score. Grand Prix (GP), Prix St. Georges (PSG).

Table S3. Average scores for Para athletes by grade and non-disabled athletes by level for performance measures. These are as follows; 3D simulator trunk rotation signal power (SPowersf) (deg².s) and harmonic ratio (SRatiosf) at the stride frequency during simulated walk and trot, head stability (%), dynamic symmetry and symmetry vector for the trunk (Sym Trunk, SVector Trunk) and pelvis (Sym Pelvis, SVector Pelvis) (normalised to trunk length and pelvis width respectively) during walk, average absolute deviation of detrended coordination variability of 3D trunk to pelvis rotation (deg) during simulated walk (DVar walk) and trot (DVar Trot). Grand Prix (GP), Prix St. Georges (PSG).
