Hd-27605	355	bulk	9204	± 44	-28.9	9205
Hd-28156	400	bulk	9465	± 56	-29.6	9468

4

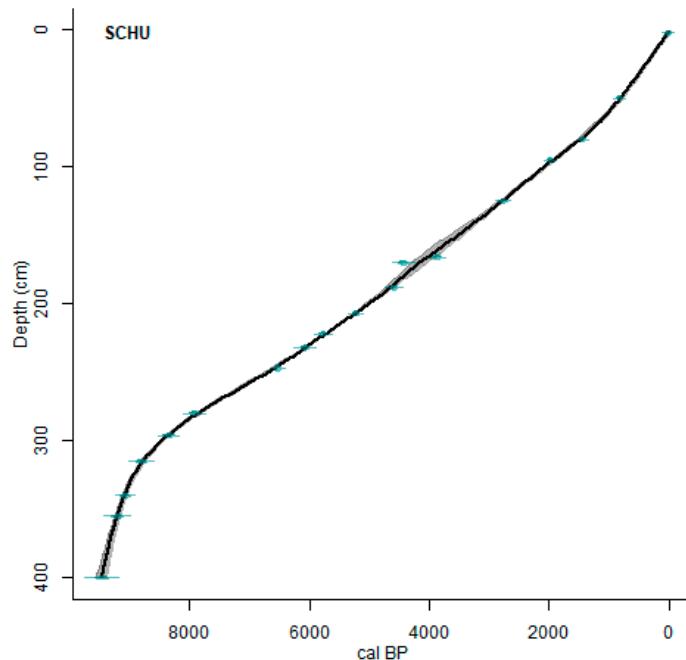

5 **Table SM-2:** Carbon-14 dates for 16 dated bulk sediment samples from Glaswaldsee, including
6 uncertainties and $\delta^{13}\text{C}$ values. The values in parenthesis indicate one sample which was removed
7 from the age-depth model.

lab code	depth	material	^{14}C age	1 St.Dev.	$\delta^{13}\text{C}$	cal age
[-]	[cm]	[-]	[yr BP]	[yrs]	[‰]	[cal yr BP]
Hd-26951	8	bulk	586	± 31	-30.8	558
Hd-27051	30	bulk	1344	± 30	-32.2	1285
Hd-26823	40	bulk	1737	± 25	-33.1	1701
Hd-26950	48	bulk	2205	± 33	-32.4	2093

11 **Figure SM-1:** Age-depth model of Schurmsee, developed using CLAM 2.2. The grey shaded area
 12 represents the confidence interval of the model. The age calendar age distribution of each sample
 13 included in the model is marked in green.

14

15

16 **Figure SM-2:** Age-depth model of Glaswaldsee, developed using CLAM 2.2. The grey shaded area
 17 represents the confidence interval of the model. The age calendar age distribution of each sample
 18 included in the model is marked in blue, while one sample that was excluded from the model is
 19 marked in red.
