Means marked by different lowercase letters in column (for each crop year) and for each main factor (crop year, growing area and harvest period), are significantly different (Tukey's test, $p \leq 0.05$), ns – not significant. 1–4, harvest period, see also Table 1. Values were calculated as the percentage of the total.

Supplemental Table 5. Results of three-way analysis of variance for sensory properties of Oblica virgin olive oils obtained from two distinct olive orchards in three successive crop years
