

## Supplementary Materials:

**Figure S1.** Schematic representation of single chain fragment variable antibody (scFv) and H9HA ectodomain fused scFv antibody expression cassettes (a) scFv construct. The expression cassette includes *Drosophila melanogaster* immunoglobulin heavy chain binding protein (BIP) secretion signal sequence followed by scFv antibody: variable light chain (vL), linker peptide (Gly<sub>4</sub>Ser)<sub>4</sub> and variable heavy chain (vH). The V5 tag is for detection and His tag for purification (b) H9HA Foldon-scFv construct. The expression cassette includes BIP secretion signal sequence followed by H9HA ectodomain fused with trimerisation signal (indicated as foldon), conjugated to scFv antibody: variable light chain (vL), linker peptide (Gly<sub>4</sub>Ser)<sub>4</sub> and variable heavy chain (vH).

**Table S1.** Sequences of probes and primers used for qRT-PCR.
