

**A****B****C**

**Supplemental** Figure 1. TF-DNA complex assay validation. **(A)** As previously reported in the literature, MPO-DNA complexes in plasma dose-dependently increased after stimulation of the whole blood with increasing LPS dosages (0–25 µg/mL) ( $n = 1$ ). **(B)** Levels of plasma TF-DNA complexes follow a similar dose-dependent trend being induced by higher LPS concentrations ( $n = 1$ ). **(C)** Direct relationship between MPO-DNA and TF-DNA ( $n = 1$ ). LPS = lipopolysaccharide, MPO = myeloperoxidase, TF = tissue factor.
