

Figure S1. Leukocyte-endothelium interaction evaluation under SS-31 and SS-20 treatment. (A) Number of rolling PMN in 1 min, (B) velocity of this rolling PMN and (C) PMN adhesion to the endothelial monolayer. * $p < 0.05$ with regard to control group; ## $p < 0.01$ ### $p < 0.001$ vs. non-treated T2D group.
