Overall P values were obtained by Kruskal-Wallis test and Chi-square test between five subgroups. P values by Holm test for a pair of five subgroups were shown. BMI: body mass index; HOMA2-B: homeostatic model assessment 2 estimates of β -cell function; HOMA2-IR: homeostatic model assessment 2 estimates of insulin resistance; HbA1c: Hemoglobin A1c; eGFR: estimated glomerular filtration rate; LDL: low density lipoprotein; NAFLD: nonalcoholic fatty liver disease.

Table S2. Multiple log-rank test for a pair of five subgroups in Kaplan-Meier survival analysis (Figure 2).

	Over all	SAID vs SIDD	SAID vs SIRD	SAID vs MOD	SAID vs MARD	SIDD vs SIRD	SIDD vs MOD	SIDD vs MARD	SIRD vs MOD	SIRD vs MARD	MOD vs MARD

P values by log-rank test for overall five subgroups or P values by multiple log-rank test for a pair of five subgroups.

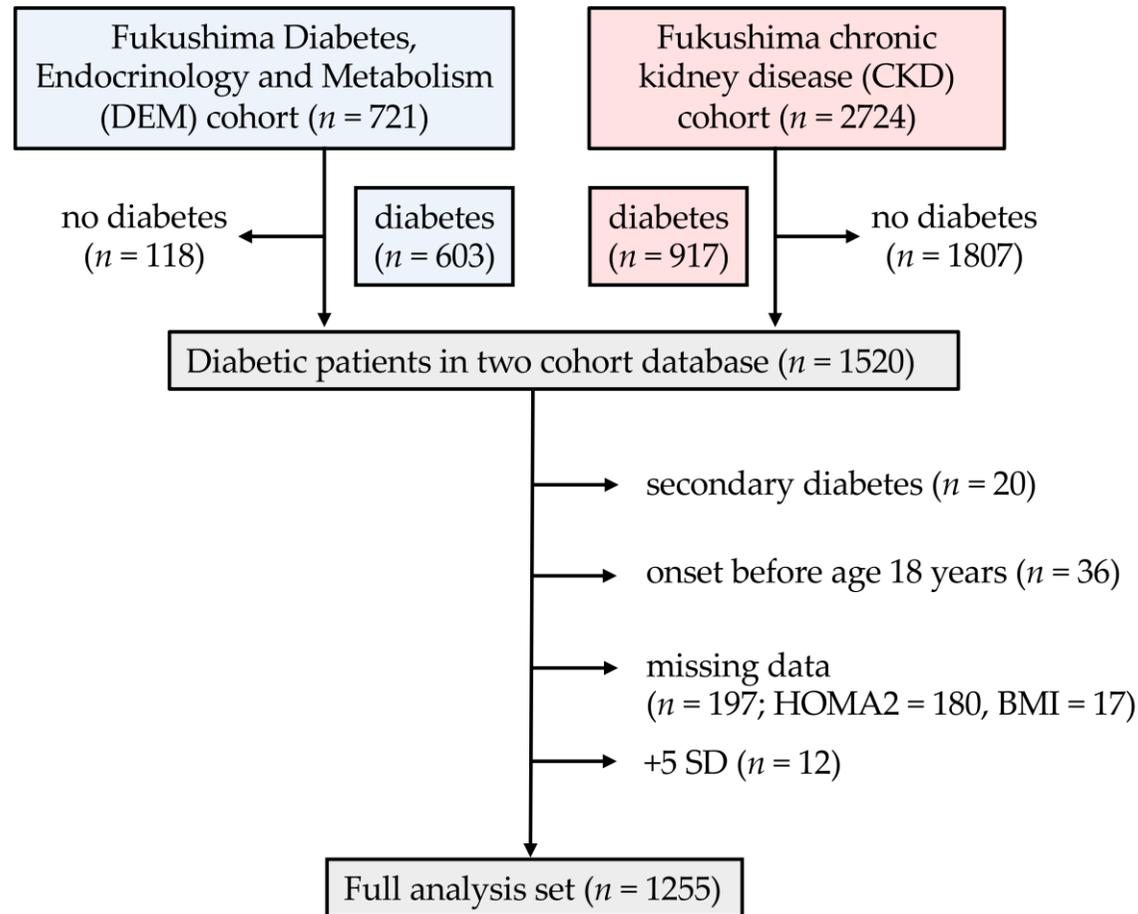

Figure S1. Enrollment flow chart Among the 3444 patients surveyed, 1520 were diagnosed as having diabetes. Patients with secondary diabetes, onset before age 18 years, missing data, and extreme outliers (> 5 SDs from the mean) were excluded. CKD: chronic kidney disease; HOMA: homeostatic model assessment; BMI: body mass index; SD: standard deviation
