Figure S1. Standard calibration straight line Doxo on Eu:cit-cAp nanocrystals. Dotted blue line represents the lineal fitting of the experimental data.

Table S1. Kinetics parameters obtained from the lineal fitting of the experimental data.

Parameter		R ²
Intercept [ua]	-0.1 ± 0.3	0.99424
Slope [mL mg ⁻¹]	24.7 ± 0.6	

Equation S1:

$$O(t) = O_{max} (1 - e^{(-t/\tau)})$$
 (Lagergren's equation)

Q is the amount of drug adsorbed on the nanoparticle surface and τ the time needed to reach approximately a 63% of Q_{max}

Figure S2. (a) excitation (dashed line) and emission (solid line) spectra of Eu:cit-cAp nanoparticles suspended in water at 25 °C at several pHs and (b) the effect of the pH on the luminescence emission of these particles; slit-widthsexc/em = 10/10 nm, td = $120 \mu s$, tg = 5 ms, detector voltage 800v.

Figure S3. (a) excitation (dashed line) and emission (solid line) spectra of Eu:cit-cAp nanoparticles loaded with 0.139 mg Doxo/mg Eu:cit-cAp suspended in water at 25 °C at several pHs, and (b) the effect of the pH on the luminescence emission of these particles; slit-widths_{exc/em} = 10/10 nm, t_d = 120 μ s, t_g = 5 ms, detector voltage 800v.

Figure S4. luminescence decay curve of Eu:cit-cAp nanoparticles suspended in water at 25 °C at several pHs, $\lambda_{\text{exc/em}}$ =394/618 nm, slit-widths_{exc/em} = 10/10 nm, and detector voltage = 780 V. Circles correspond to experimental data and lines to the fitting equation.

Figure S5. luminescence decay curve of Eu:cit-cAp nanoparticles loaded with 0.139 mg Doxo/mg Eu:cit-cAp suspended in water at 25 °C at several pHs. $\lambda_{exc/em}$ = 394/614 nm, slit-widths_{exc/em} = 10/10 nm, and detector voltage = 780 V; circles correspond to experimental data and lines to the fitting equation.

Figure S6. (*a*, *b*) calibration curve of Doxo in water, and (**c**) determination of the absorbed Doxo on the Eu:cit-cAp nanoparticles versus the equilibrium Doxo concentration.

Figure S7. luminescence decay curve of Eu:cit-cAp/Doxo nanoparticles with varying concentration of Doxo suspended in HEPES buffer at pH=7.4 and 25° C; $\lambda_{exc/em} = 394/614$ nm, slit-widths_{exc/em} = 10/10 nm, and detector voltage = 780 V; circles correspond to experimental data and lines to the fitting equation.

Figure S8. Variation of the apparent quenching constant with the concentration of the quencher.
