Figure S1. (a) Magnified XRD spectra of CrO₂, 450 °C and 500 °C NRs. (b) Plot of T_A dependence of lattice constants of Cr₂O₃ phase, where dashed-dot and dashed lines represent the lattice constant $a = b$ and c of bulk Cr₂O₃, respectively.

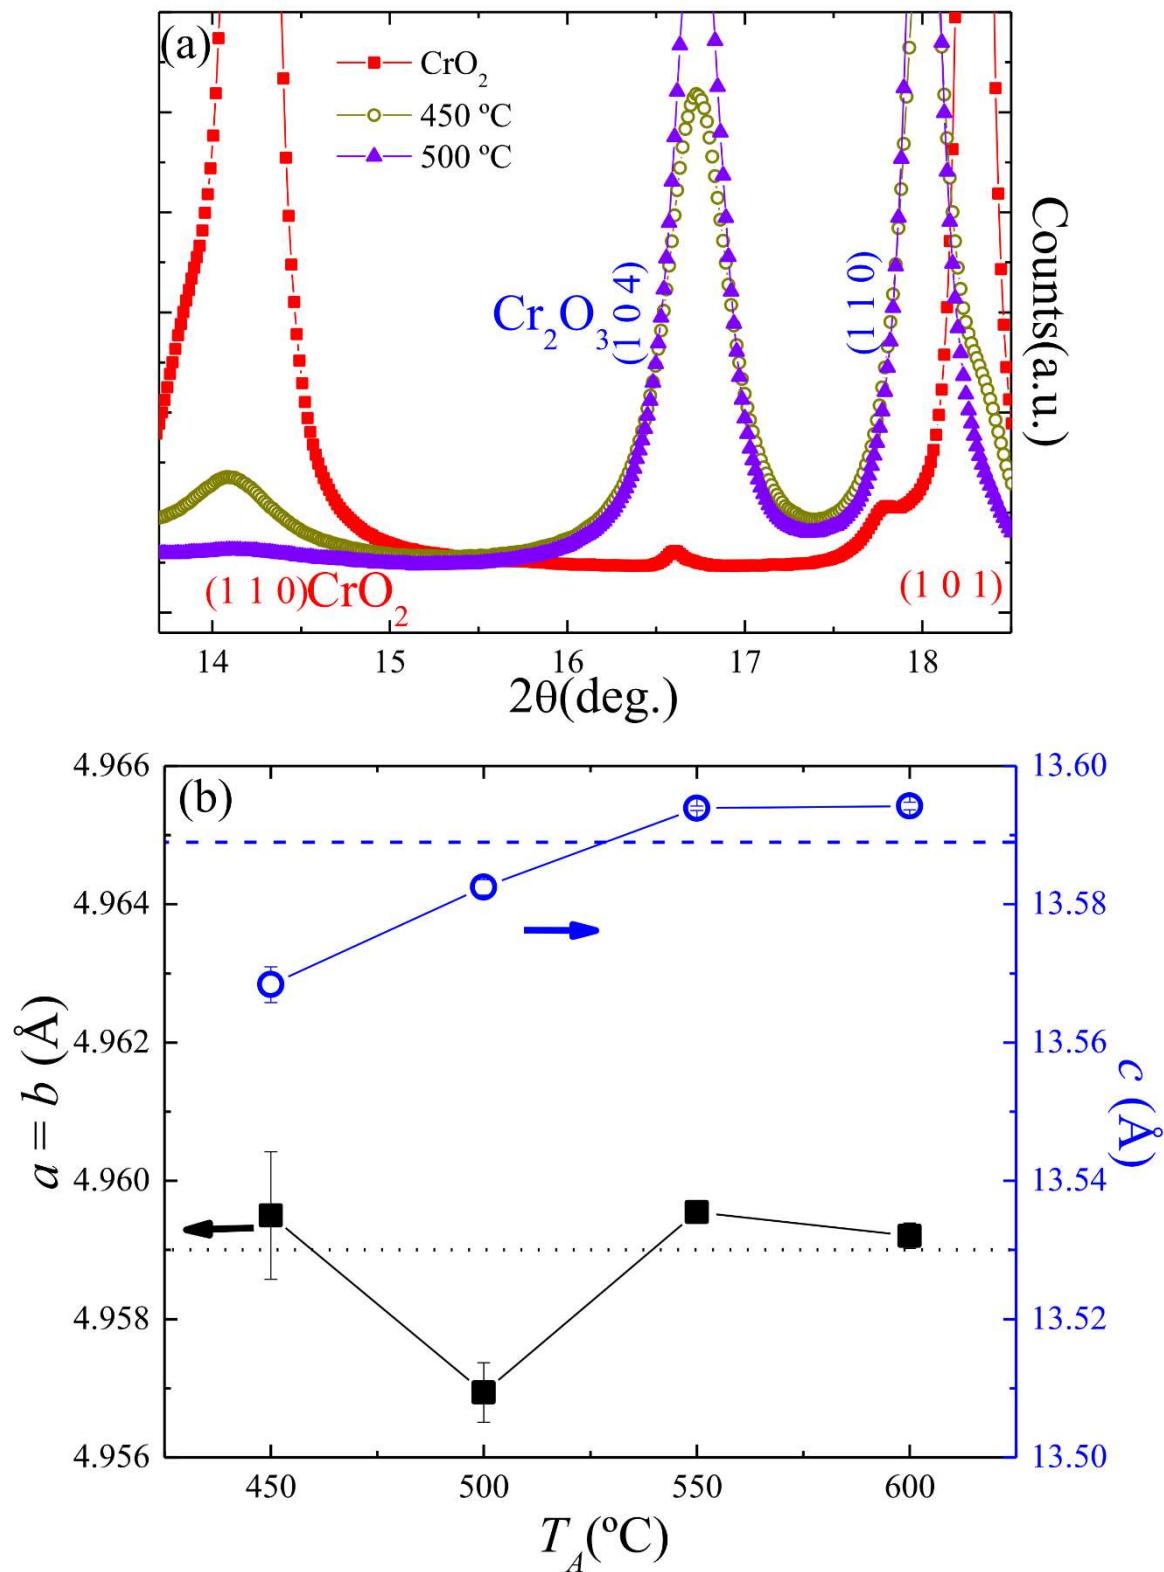

Table S1. Summary of the fitting parameters obtained from the Rietveld refined SRXRD spectra. All structural and lattice parameters were allowed to vary simultaneously, and the unweighted Rp, the weighted wRp factor, differed by less than one part in a thousand in two successive cycles.
