Table S2 Summary of mean monthly seawater carbonate chemistry. $p\text{CO}_2$ ($n = 3$, $\pm \text{SD}$) was calculated from total alkalinity (TA, $n = 3$), dissolved organic carbon (DIC, $n = 3$) and pH on total scale ($n = 3$) measurements of seawater corresponding to each treatment (Wahl et al. 2015 [62], M. Böttcher and V. Winde pers. comm.).

Table S3 Initial superoxide dismutase (SOD) activity and total soluble protein (TSP) content of *Fucus vesiculosus* apices in its native habitat (initial, $n = 12$) and after growing for 3 months in different seasons, temperature, and pCO₂ conditions in the Benthocosms ($n = 3$). Seasons: spring: 04.04-19.06.2013; summer: 04.07-17.09.2013; autumn: 10.10-18.12.2013; winter: 16.01-01.04.2014. Temperature and pCO₂ conditions: +Temp +CO₂: elevated temperature Δ+5°C with elevated pCO₂, +Temp: elevated temperature Δ+5°C with *in situ* pCO₂, +CO₂: *in situ* Kiel Fjord temperature with elevated pCO₂, Ambient: *in situ* Kiel Fjord temperature and pCO₂. Values are means ± SD (standard deviation). Cross (†) indicates dieback of *F. vesiculosus* in the summer experiment under warming.

			SOD (U g ⁻¹ DM)	TSP (mg g ⁻¹ DM)
Spring	April	Initial	67.0±9.5	171.2±33.0
		+Temp +CO ₂	78.5±9.4	56.1±13.2
	June	+Temp	80.4±2.8	73.5±10.1
		+CO ₂	94.3±13.0	53.0±10.8
		Ambient	87.7±10.3	65.1±13.4
Summer	July	Initial	22.6±16.2	25.3±27.6
		+Temp +CO ₂	†	†
	September	+Temp	†	†
		+CO ₂	20.6±2.0	20.6±5.2
		Ambient	15.7±1.7	21.5±0.7
Autumn	October	Initial	38.6±12.3	68.5±35.6
		+Temp +CO ₂	90.0±16.3	53.8±14.3
	December	+Temp	94.8±16.0	65.0±16.1
		+CO ₂	71.8±19.8	60.7±34.7
		Ambient	80.8±14.9	59.3±8.2
Winter	January	Initial	84.5±26.9	74.3±30.4
		+Temp +CO ₂	168.4±57.2	31.4±11.0
	April	+Temp	129.8±15.7	46.3±34.8
		+CO ₂	149.5±30.6	71.3±16.1
		Ambient	127.9±11.9	76.8±24.4

Figure S1 (a) pH in the control (blue) and +CO₂ (red) experimental units of a tank with ambient temperature and in Kiel Fjord (*in situ*, black). (b) pH in the +Temp (blue) and +Temp +CO₂ (red) experimental units of a tank with increased temperature and in Kiel Fjord (*in situ*, black). Note that Kiel Fjord pH measurements prior to 30 May were taken at a shallower depth than the inlet of the flow-through. After that date pH in Kiel Fjord was measured close to the inlet (modified according to Wahl et al. 2015 [62]).
