MMP-13	↔	27	2	29	—	24	5	15 Tx ⁱ , 14 Prednisolone, 1 Interferon-β, 1 AZA	29 RRMS, 17 ONND, 10 OIND	(241)
MPO	↔	2	17	—	19	19	—	12 AZA, 13 PRN, 2 MMF, 1 CP, 1 RTX, 1 MTO	10 MS	(258)
PTX-2	↔	2	17	—	19	19	—	12 AZA, 13 PRN, 2 MMF, 1 CP, 1 RTX, 1 MTO	10 MS	(258)
Resistin	↑	47	9	56	—	44	12	—	56 HC	(255)
S100B	↔	58	19	NR	NR	36 ^j	27 ^j	NR	48 RION, 39 UCON, 38 MSON, 18 CRION, 11 ION, 47 RRMS, 45 HC	(265)
sICAM-1	↑	25	—	25	—	19	6	12 Prednisolone	17 HC	(238)
	↔	25	—	25	—	19	6	12 Prednisolone	21 RRMS, 20 ONND	(238)
SOD	↑	NR ^d	NR ^d	—	11	NR	NR	—	11 HC	(261)
Soluble CD40 Ligand	↑	25	2	27	—	25	2	3 Corticosteroids + Azathioprine	14 HC	(267)
	↔	27	2	29	—	24	5	15 Tx ^g , 14 Prednisolone, 1 Interferon-β, 1 AZA	29 MS, 17 ONND, 10 OIND	(72)
	↔	25	2	27	—	25	2	3 Corticosteroids + Azathioprine	19 RRMS	(267)
sVCAM-1	↔	25	—	25	—	19	6	12 Prednisolone	21 RRMS, 20 ONND, 17 HC	(238)
TIMP-1	↔	27	2	29	—	24	5	15 Tx ⁱ , 14 Prednisolone, 1 Interferon-β, 1 AZA	29 RRMS, 17 ONND, 10 OIND	(241)
	↔	NR ^d	NR ^d	—	11	NR	NR	—	11 HC	(261)
TGF-β	↔	10	4	14	—	11	3	—	20 RRMS, 16 HC	(257)
THP	↑	NR ^d	NR ^d	—	11	NR	NR	—	11 HC	(261)
Tissue necrosis factor-α	↑	23	2	—	25	NR	NR	NR	20 HC	(259)
	↑	32	2	—	34	14	19	20 Interferon-β	30 HC	(264)
	↔	2	17	—	19	19	—	12 AZA, 13 PRN, 2 MMF, 1 CP, 1 RTX, 1 MTO	10 MS	(258)
	↔	23	2	—	25	NR	NR	NR	25 MS	(259)
	↔	32	2	—	34	14	19	20 Interferon-β	24 RRMS	(264)
	↓	NR ^d	NR ^d	—	11	NR	NR	—	11 HC	(261)

AMCase, acidic mammalian chitinase; AD, Alzheimer's disease; AOPP, advanced oxidation protein products; AQP4-Ab, aquaporin-4 autoantibody; AZA, azathioprine; BAFF, B-cell activating factor; C5b-9, terminal complement complex; CCL, chemokine (C-C motif) ligand; CHI3L1, chitinase-3-like proteins 1; CHT, chitotriosidase; CNS, central nervous system; CP, cyclophosphamide; CRION, chronic relapsing isolated optic neuritis; CRP, c-reactive protein; CXCL, chemokine (C-X-C motif) ligand; GC, glucocorticoids; G-CSF, granulocyte colony stimulating factor; GFAP, glial fibrillary acidic protein; HC, healthy control; HGMB1, high mobility box protein 1; hs-CRP, high sensitivity c-reactive protein; IL, interleukin; IL-1Ra, interleukin-1 receptor antagonist; ION, isolated optic neuritis; LAP, relapse; LETM, longitudinally extensive transverse myelitis; MDA, malonyldialdehyde; MMF, mycophenolate mofetil; MMP, matrix metalloproteinase; MPO, myeloperoxidase; MS, multiple sclerosis; MSON, multiple sclerosis optic neuritis; MTO, mitoxantrone; NMOSD, neuromyelitis optica spectrum disorder; NR, Not reported; OIND, other inflammatory neurologic disorders; ON, optic neuritis; OND, other neurologic disorders; ONND, other non-inflammatory neurologic disorders; PDN, prednisolone; PTX, pentraxin; RION, relapsing inflammatory optic neuropathy; REM, remission; RRMS, relapsing remitting multiple sclerosis; RTX, rituximab; S100B, S100 calcium-binding protein B; sICAM-1, soluble intercellular adhesion molecule 1; SOD, superoxide dismutase; SPMS, secondary progressive MS; sVCAM-1, soluble vascular cell adhesion molecule 1; TARC, thymus and activation regulated chemokine; TGF-β, transforming growth factor beta; THP, total hydroperoxides; TIMP, tissue inhibitor of metalloproteinases; TNF-α, tissue necrosis factor alpha; Tx, treatment; UCON, unclassified optic neuritis.

^a Endpoint variation only applies to the disease state marked with the check mark, though the sample size was not explicitly reported.

^b Differentiates between NMOSD patient disease status at time of biopsy sampling, not between monophasic vs. relapsing-remitting forms of disease.

^c Defines preventative treatments provided during patient's remitting period of disease, not for treatment of acute relapse. Patients not receiving treatment during remission were omitted from this column.

^d If multiple groups are listed, there was statistical significance reported between the study group and both comparison groups.

^e This study cohort consisted of 11 relapsing-remitting NMOSD patients, however, the sex distribution of this study subgroup was not reported.

^f This study cohort consisted of 25 AQP4-IgG seropositive MS patients, 19 of which fulfilled the revised 2006 Wingerchuk NMO diagnostic criteria, though the sex distribution of this subset of patients was not reported.

^g Patients were seronegative for AQP4-IgG.

^h NMOSD patients in study group presented with LETM, defined as spinal cord lesions extending continuously for more than 3 vertebral segments on MRI.

ⁱ One of the original six NMOSD patients was removed from the study prior to analysis of this endpoint, thereby altering the sample's demographic data.

^j This study did not specify between patients receiving monotherapy or combination therapy.

^k Though 63 NMOSD patients were tested for AQP4-IgG, 14 remained untested and therefore have an unknown autoantibody serostatus.

^l Though this study reported an NMOSD study group with an n of 16, the sex distribution of only 15 patients were included in the demographic data.

¹ Patients received at least one immunomodulatory therapy, such as corticosteroids, azathioprine, methylprednisolone pulse therapy, or IFN-β.
