

**Table S1.** Genetic diversity parameters of different *A. glutinosa* sample lots (GCU populations and open pollinated families), compared in present study. *Na* – no of different alleles; *Ne* – effective no of alleles; *Ho* – observed heterozygosity; *He* – expected heterozygosity; *F* – inbreeding coefficient; *Ar* – allelic richness, based on 2 diploid individuals. All genetic diversity parameters are provided with standard errors.
