Supplementary Figures

SF 1. Oxidative dot-blots of roots and leaves proteins from *Paspalum fasciculatum* Willd (ex Flüggé) (Poaceae). Panels show chemiluminescence signal of carbonylated proteins for control (C) and exposed (R) samples. Panels A-C: correspond to roots exposed to 30 mg kg⁻¹ Cd for 30, 60 and 90 days, respectively. Panels D-C: leaves exposed to 30 mg kg⁻¹ Cd for 30, 60 and 90 days, respectively. Panels G-I: leaves exposed to 50 mg kg⁻¹ Pb for 30, 60 and 90 days, respectively.
