

Figure S1. Frequency distribution and Spearman rank correlations of mean disease index of the CG lines in four experiments, dm_2014S, dm_2014A, dm_2015A, and dm_2016S. ** and *** indicate significance at $p < 0.001$ and $p < 0.01$, respectively.

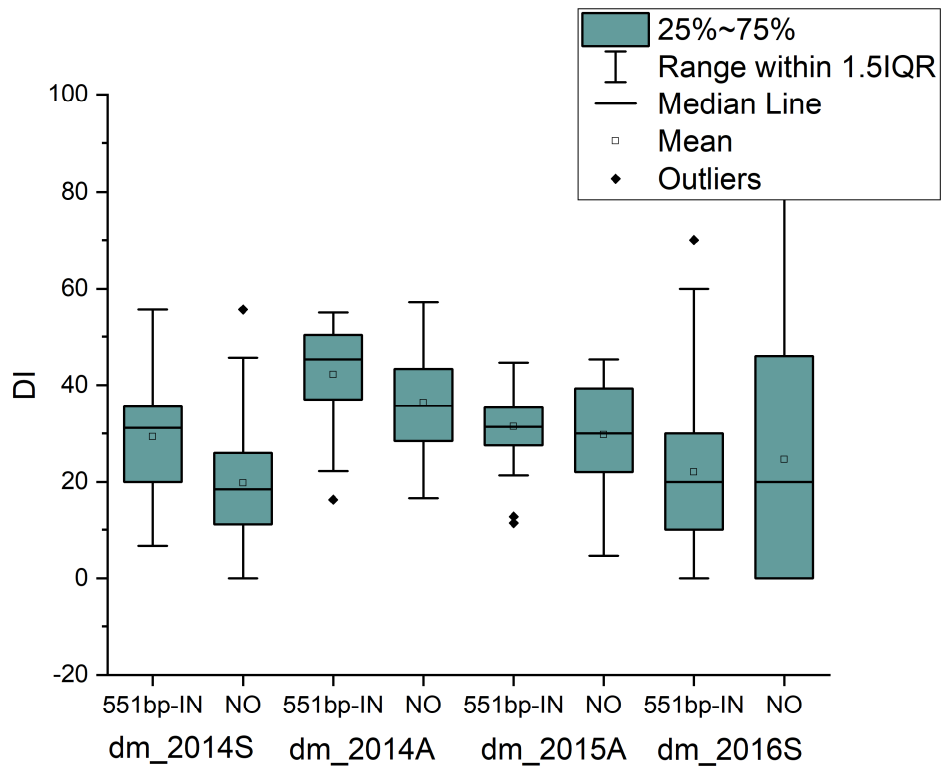

Figure S2. Disease index (DI) of four experiments for the CG lines with (551bp-IN) and without (NO) the 551-bp insertion in the RLK (*Receptor-like Kinase*) gene reported by Berg et al. 2020 [11].
