

Supplementary Figures for Deng et al, 4 Dec 2022

Supplementary Figure S1. Heat map table of differentially expressed proteins in 661W cells treated by H₂O₂ and Aβ when compared to the control. Orange and blue bars represent the proteins increased and decreased in abundance in specific treatments.

Supplementary Figure S2. Network analysis of 61 commonly regulated proteins by both H_2O_2 and A β in 661 photoreceptor cells. Six colors separately indicate proteins in three groups including biological process, molecular function, and cellular components after GO enrichment analysis.
