Table S2**Analysis of the best complex conformations.**

For each complex, the best cluster of conformations has been considered, and the best three energy values have been considered.

Complex	Number of conformation in the cluster	1st conf.	2nd conf.	3rd conf.	Mean energy	Dev.std
HDAC1-flavone	15	-10.29	-10.23	-9.86	-10.13	0.23
HDAC1-luteolin	9	-9.41	-9.26	-8.87	-9.18	0.28
HDAC1-apigenina	12	-9.25	-8.34	-7.73	-8.44	0.76
HDAC1-vorinostat	40	-8.46	-8.38	-8.21	-8.35	0.13
HDAC2-flavone	51	-8.90	-8.90	-8.90	-8.90	0.00 ¹
HDAC2-luteolin	6	-9.26	-9.13	-9.02	-9.14	0.12
HDAC2-apigenin	1	-9.32 ²			-9.32	
HDAC2-vorinostat	63	-8.50	-8.36	-8.31	-8.39	0.10

¹ Standard deviation value obtained for HDAC2-flavone complex is equal to zero as a consequence of the same energy value observed for the first three conformations.

² For HDAC2-luteolin docking simulation, the best conformation obtained has not been clustered with other complex conformations.
