Text S1. The Specific primers used as a template for PCR amplification of the sequence area containing the type-C rusticyanin gene

The Specific primers used as a template for polymerase chain reaction (PCR) for amplification of the sequence area containing the type-C rusticyanin gene were designed according to the whole genome sequence of *A. ferrivorans* SS3 using the Primer Premier 5.0 software.

The forward primer was 5' -CCAATCCGGCATGAGACTTC-3' , start from -58 to -38 site in the upstream of 5' terminal of the *rus* gene at locus 0470.

The reverse primer was 5' - ACTTCCGTTCAACCATGGC-3' , start from 147 to 127 site in the downstream of 3' terminal of the *rus* gene at locus 0470.

Table S1. The different residues and their property differences for the type-C rusticyanin from *A. ferrivorans* SS3 comparing to the type-A from *A. ferrooxidans* ATCC 23270 and the type-B from *A. ferrooxidans* JCM 3865, respectively. The different amino acid residues are identified from the sequence alignment of rusticyanins shown as Figure S1. The amino acid residue positions are determined according the built molecular structure of the type-C rusticyanin from *A. ferrivorans* SS3 shown as Figure 6a. The hydrophobicity differences between amino acid residues are computed based on the hydrophobicity values in the Kyte and Doolittle hydrophobicity values [31]. The net charge differences at pH 2.0 between amino acid residues are computed according to the pKa values in the initial pKa values for standard amino acids [32].

Type-C rusticyanin from <i>A. ferrivorans</i> SS3		Type-A rusticyanin from <i>A. ferrooxidans</i> ATCC 23270			Type-B rusticyanin from <i>A. ferrooxidans</i> JCM 3865		
Amino acid	Position	Amino acid	Hydrophobicity difference	Charge difference at pH 2.0	Amino acid	Hydrophobicity difference	Charge difference at pH 2.0
<b>Thr1</b>	surface	Gly1	-0.3	0	Ala1	-2.5	0

Thr130	surface				Ala130	-2.5	0
<b>Total difference</b>		15	11.5	0	12	-19.2	1

Table S2. Gene contexts of the rusticyanin genes in *A. ferrivorans* SS3 [17] and *A. ferrooxidans*. All involved sequences are from the public sequence database of NCBI (National Center for Biotechnology Information) ([www.ncbi.nlm.nih.gov](http://www.ncbi.nlm.nih.gov) (accessed on 30 June 2023)). The gene background information of *rus* genes from *A. ferrooxidans* SS3 was from the whole genome sequence of NCBI accession NC\_015942. The gene background information of the *rusA* from *A. ferrooxidans* ATCC 23270 is from the whole genome sequence of NCBI accession NC\_011761. The gene background information of the *rusB* from *A. ferrooxidans* 3865 was from the sequence of NCBI accession AB094633 and reported by Kazuhiro Sasaki et.al [13,33].
