

**Supplementary Figure S1.** Technological parameters of grape berries from different loading grapes during the ripening stages. Data are presented as mean  $\pm$  standard error ( $n=3$ ). Different letters indicate significant differences (Duncan's multiple range test,  $p \leq 0.05$ ).

**Supplementary Figure S2.** Changes of total monoterpenes (total free and total bound) profiles in Muscat Hamburg grape at six developmental stages.

**Supplementary Figure S3.** eggNOG function classification on brown module genes.

**Supplementary Figure S4.** KEGG analysis on brown module genes. Column length indicates the number of genes under this category.

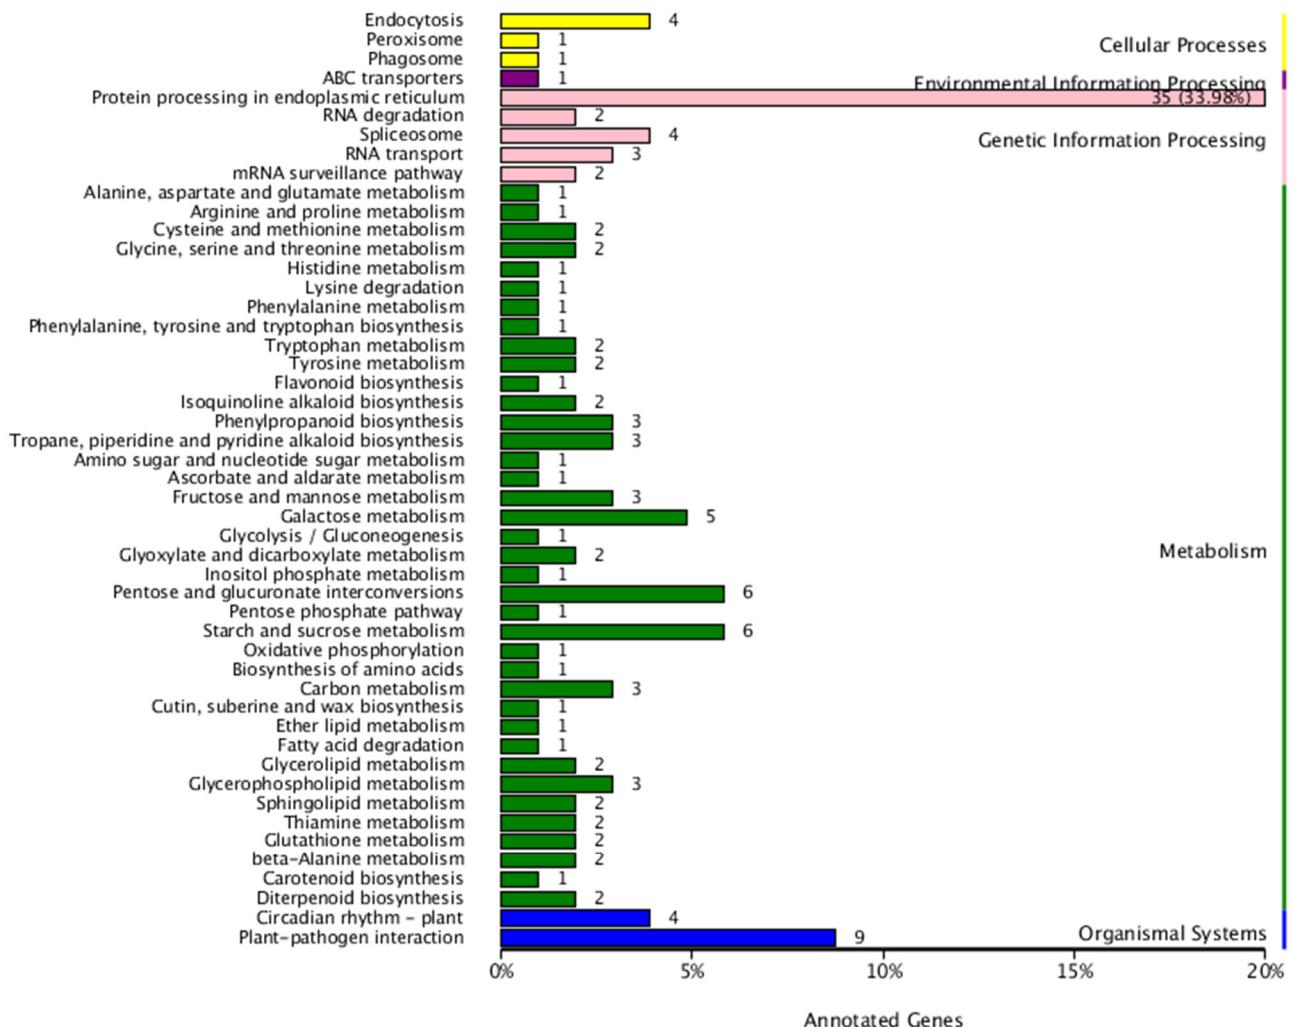

Table S1. Changes of free monoterpenes profiles in Muscat Hamburg grape at six developmental stages.

Free monoterpenes ( $\mu\text{g/L}$ )	E-L 35			E-L 35.5			E-L 36		
	L	M	H	L	M	H	L	M	H

Total reads: the number of clean reads, calculated on a single-ended basis. Clean reads: total number of pair-end reads in clean data. Mapped reads: the number of reads mapped to the reference genome and the percentage of reads in clean reads. GC content: clean data GC content, that is, the percentage of bases G and C in the total base in clean data. Q20 and Q30 indicate the ratio of the number of bases in the filtered reads greater than 20 and 30 to the total number of bases, reflecting the quality of the sequencing data.

Table S4. KEGG enrichment analyses of DEGs

ID	Pathway	Number of DEGs	Background number	p-value(<0.05)
L-EL35 vs M-EL35 vs H-EL35

KEGG enrichment analyses of DEGs. Pathway: name of KEGG pathway. Ko: KEGG path id.

P-value: statistical significance of enrichment. The smaller the P-value, the higher the enrichment

degree,  $P\text{-value} \leq 0.05$ .

Table S5. Number of genes in each WGCNA module

Module name	Gene number
MEblack	137
MEblue	1932
MEbrown	492
MEgreen	162
MEgreenyellow	67
MEmagenta	112
MEpink	118
MEpurple	67
MEred	150
MEtan	55
