

Table S1. Hydrolysates produced by 5 h enzymatic hydrolysis with Protease A based on different types of raw material and glucosamine (G) addition at a ratio of 1:10 relative to the protein content of the raw materials.

Animal source	Glucosamine addition	Inactivation temp.	Product name
Bovine meat	No	90	Meat
	G 1:10	90	Meat+G
Bovine heart	No	90	Heart
	G 1:10	90	Heart+G
Porcine hemoglobin	No	90	Hemo
	G 1:10	90	Hemo+G
Porcine plasma	No	85	Plasma
	G 1:10	85	Plasma+G

Table S2. Peak areas ($\times 10^{-5}$) of the volatile compounds in the hydrolysates with or without glucosamine (G) relative to the peak area of the internal standard. Different letters within the same rows indicate significant ($P < 0.05$) differences according to Tukey's test.

Compound	Meat	Meat+G	Heart	Heart+G	Hemo	Hemo+G	Plasma	Plasma+G	Retention index
