

Supplementary Figures

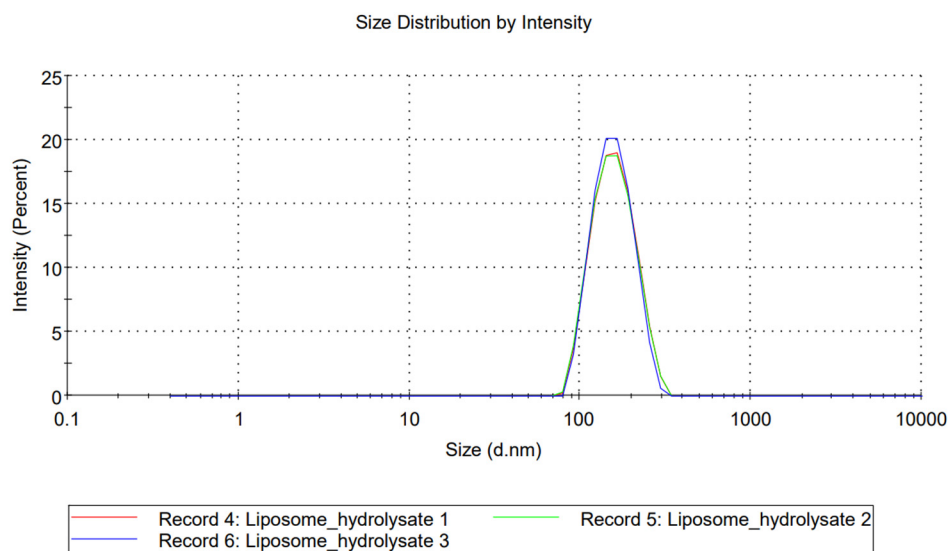

Figure S1: Dynamic light scattering (DLS) analysis showed size distribution of loaded liposome particle at 25 °C in the PBS solution (n=3).

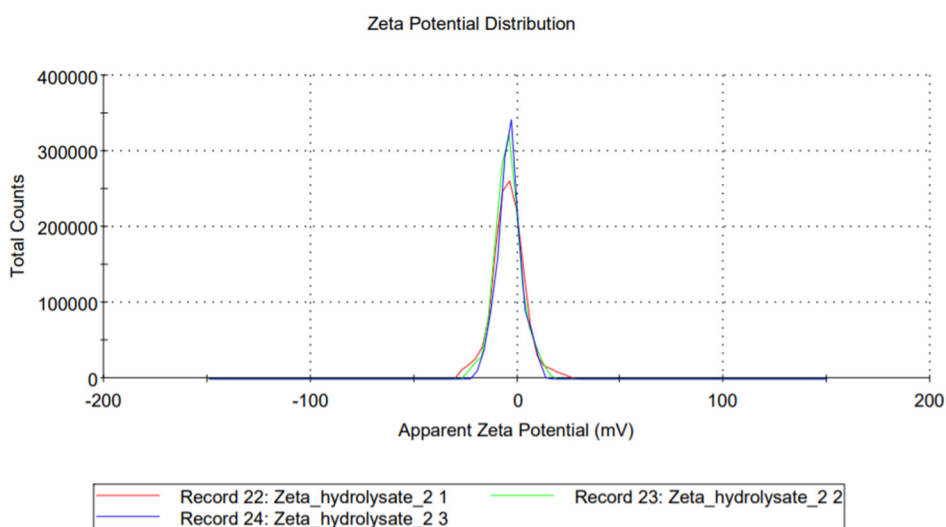

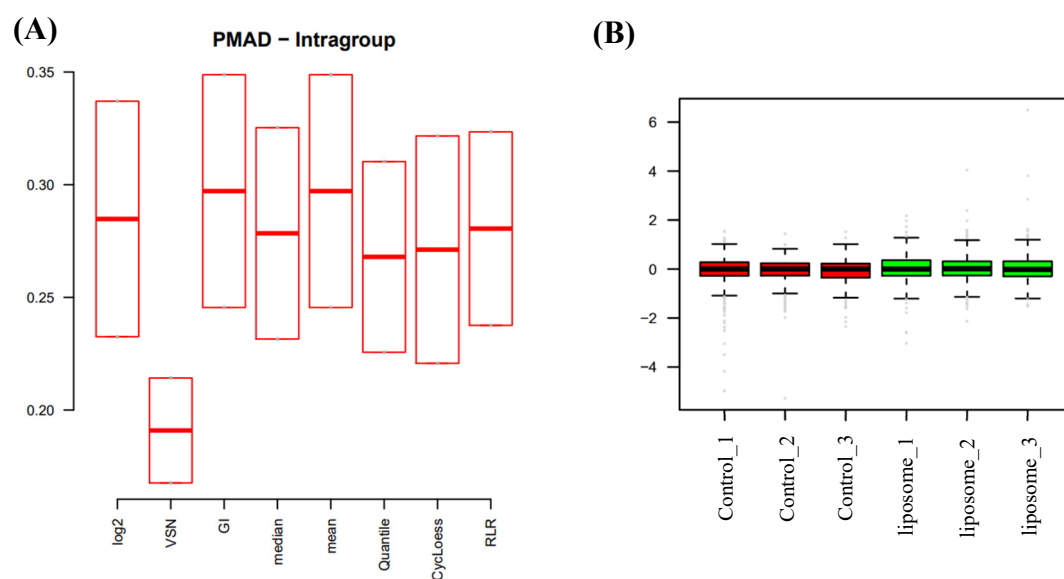

Figure S2: Dynamic light scattering (DLS) analysis showed zeta-potential distribution of loaded liposome particle at 25 °C in the PBS solution (n=3).

Supplementary Figure S3: Intragroup variation was measured with pooled intragroup median absolute deviation (PMAD) of the identified proteins (A) and Relative Log Expression (RLE) plots (B).
