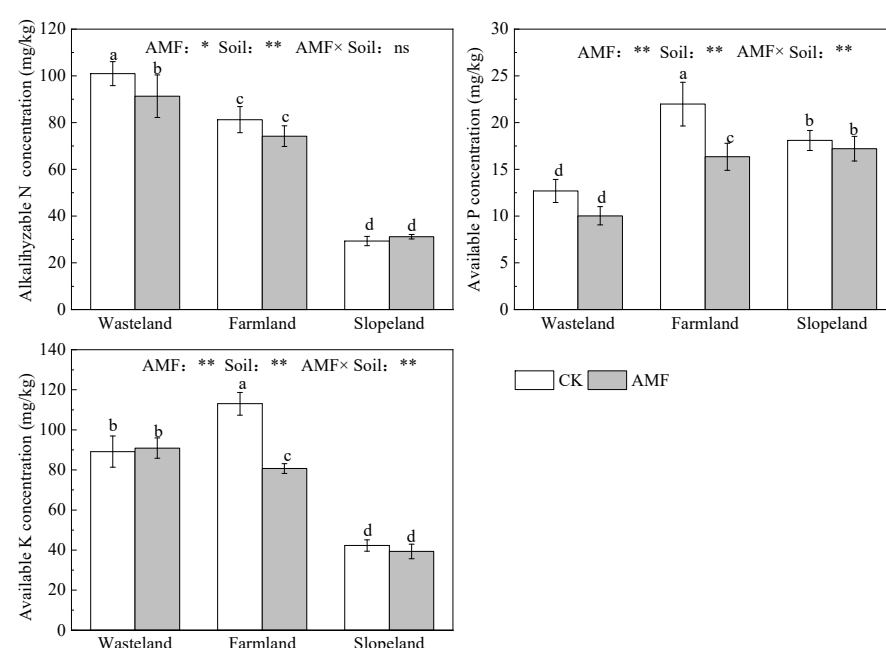

Figure S1. Effects of AMF on the concentrations of available nutrients in soil. The different lower-case letters indicate significant differences among treatments; “*”, and “**” mean $p < 0.05$ and $p < 0.01$ according to two-way ANOVA, respectively.

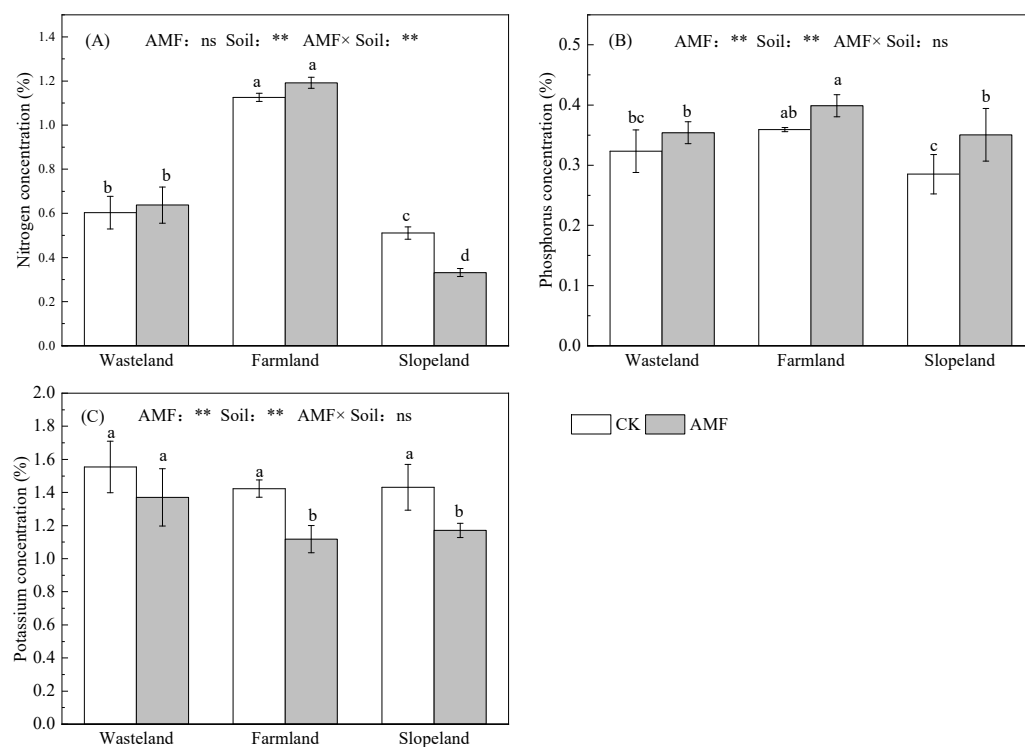

Figure S2. Effects of AMF on the concentrations of nitrogen, phosphorus and potassium in the shoots of maize. The different lowercase letters indicate significant differences among treatments; “*”, and “**” mean $p < 0.05$ and $p < 0.01$ according to two-way ANOVA, respectively.

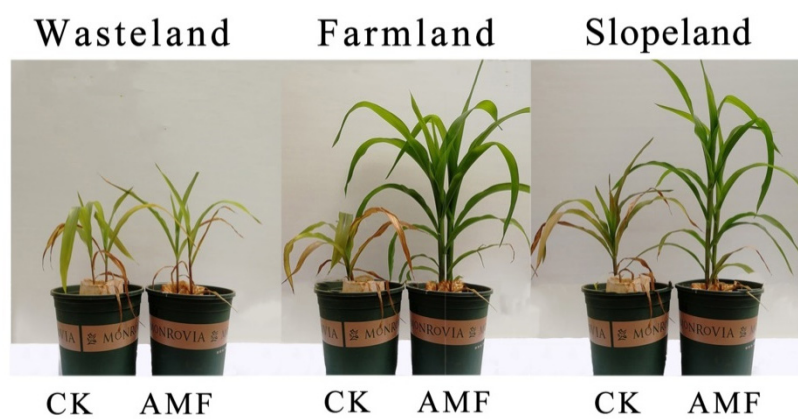

Figure S3. Growth of control and AMF-inoculated maize on wasteland, farmland, and slopeland soils.
