IO – Iron oxyhydroxide-rich sludge, CW – Carbonated waste from peat extraction, MS –Marble cutting and polishing sludge, OL – Solid olive-mill by-product, WS – Composted sewage sludge, VC – Vermicompost from pruning and gardening. Adapted from [34].

Figure S3. Diagram of the controls (PS and US) and rehabilitation treatments of the polluted soil with each of the Technosols (T1R1-T6R6).

Figure S4. Scheme and close-up of the rehabilitation of polluted soils via surface application of Technosols (T1R1-T6R6).

Table S3. Results of the certified reference material of Loamy clay soil CRM 052-050 (RT-Corporation Limited, Salisbury, UK) analysed by X-ray fluorescence (XRF) with a portable NITON XL3t-980 GOLDD+ analyser (Thermo Fisher Scientific, Waltham, MA, Billerica, USA).

Element	Certified value	Prediction interval		Measured value	LOD
		Low	High		
As	14.60 (1.71)	10.90	18.30	15.53 (3.96)	7
Cd	35.60 (1.89)	31.60	39.60	41.15 (4.96)	12
Cu	44.20 (3.11)	37.60	50.80	48.51 (8.01)	13
Fe	12,400 (1,170)	9,870	14,900	11,187 (96)	N/A
Pb	82.60 (5.10)	71.80	93.40	92.62 (4.84)	8
Sb	20.10 (6.23)	6.13	34.20	30.25 (5.42)	20
Zn	89.00 (8.56)	70.90	107.00	94.41 (6.23)	10

Measured values are the mean of 6 replicates and standard error in parentheses. The limits of detection (LOD) are also shown. All values are given in mg kg⁻¹. N/A: Not applicable.

Table S4. Results of the certified reference material of Loamy clay soil CRM 052-050 (RT-Corporation Limited, Salisbury, UK) analysed by ICP-MS PerkinElmer® NexION™ 300D (Waltham, MA, USA).

Element	Certified value	Measured value	% (+/-)
As	14.60	12.80	-12
Cd	35.60	31.60	-11
Cu	44.20	32.70	-26
Pb	82.60	74.80	-9
Sb	20.10	23.73	+18
Zn	89.00	77.00	-13

Measured values are the mean of 6 replicates. All values are given in mg kg⁻¹.

Table S5. Principal component analysis (PCA) after Varimax rotation with Kaiser normalization including soil properties [pH, electrical conductivity (EC), organic carbon (OC) and CaCO₃ content, and total nitrogen and carbon (N_T, C_T)], total (T), water-soluble (W), and EDTA-bioavailable (E) concentrations of metal(loid)s, soil enzymatic activities (dehydrogenase, β -glucosidase, acid phosphatase, and cellulase), and endpoints calculated from *T. campestris* (survival and biomass) and *L. sativa* [seed germination (SG) and root elongation (RE)] toxicity bioassays. Only coefficients above ± 0.5 were included.
