

Supplementary Material

Table S1 The primer sequences for analysed genes. NPY: Neuropeptide Y; SPP1: Osteopontin; IL6: interleukin-6; VEGFA: Vascular Endothelial Growth Factor

Gene	Primer	Sequence (5'-3')
NPY	forward	CCCGCCATGATGCTAGGTAA
	reverse	AGTGTCTCAGGGTGGATCT
SPP1	forward	CCAGCCAAGGACCAACTACA
	reverse	AGTGTGGCTGTAATGCGCC
IL6	forward	CTCTCCGCAAGAGACTTCCAG
	reverse	TTCTGACAGTGCATCATCGCT
VEGFA	forward	CGGTTCCAGAAGGGAGAGGA
	reverse	ACTTCACCACCTCATGGGCT

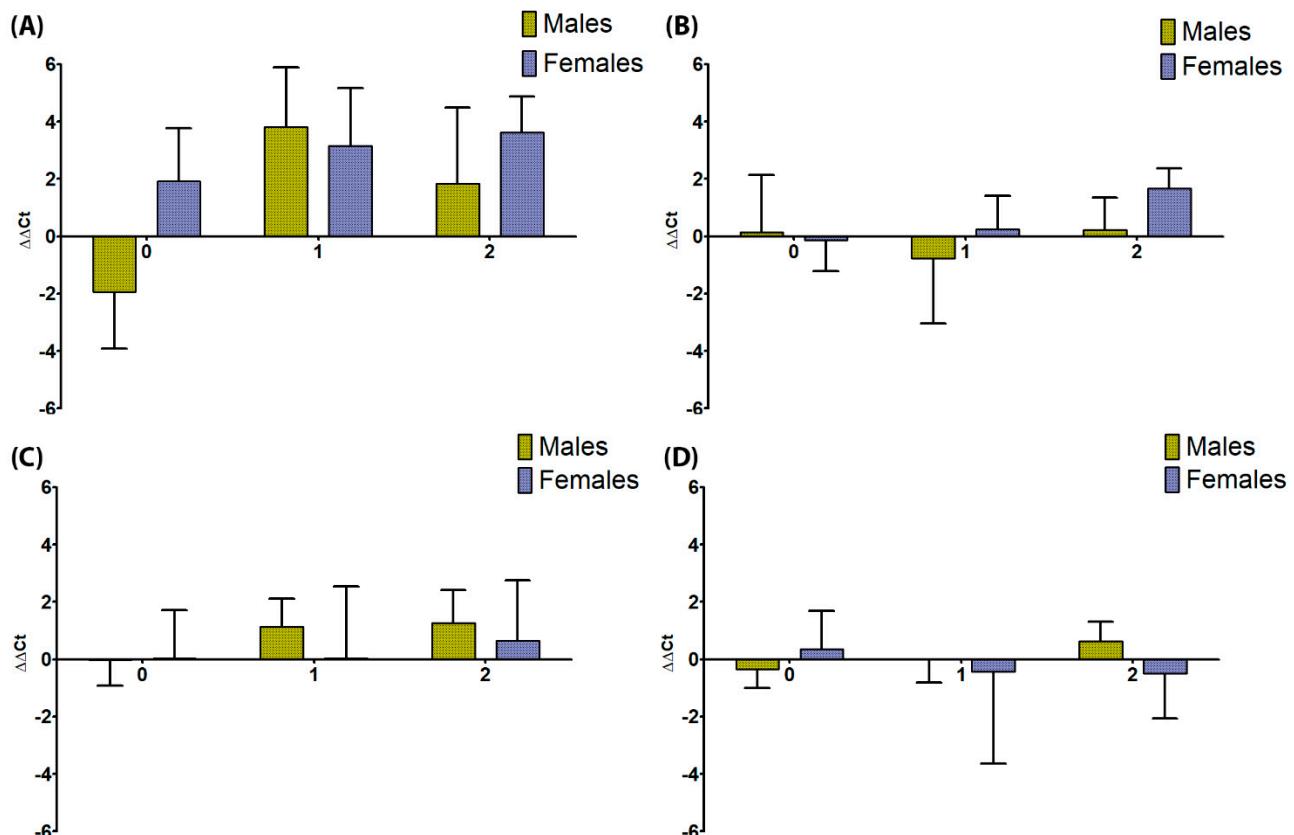

Figure S1. Gene expression analysis of kidney NPY (A), SPP1 (B), and IL6 (C) and VEGFA (D) by real-time PCR of male and female rats orally treated for 5 days with 0, 1 and 2 mg/kg bw per day of TiO₂ NP. Data are presented as mean $\Delta\Delta Ct$ values \pm standard deviation, with control samples as calibrators and GAPDH as the reference gene. Statistical analysis Mann–Whitney test. n=5.
