

Annex

Tables:

Table S1 : Anaemia severity thresholds (blood haemoglobin concentration).

Population age groups and status	Non-anaemic (g/l)	Low severity (g/l)	Moderate severity (g/l)	High severity (g/l)
5–11yrs	≥115	110–114	80–109	<80
12–14yrs	≥120	110–119	80–109	<80
Non-pregnant women aged ≥15yrs	≥120	110–119	80–109	<80
Pregnant women aged ≥15yrs	≥110	100–109	70–99	<70
Men aged ≥15yrs	≥130	110–129	80–109	<80

Classification is according to the World Health Organization guidelines [33].

Table S2: Results of semivariogram parameters for the prevalence of anaemia, and the prevalence of anaemia severity in Burundi per year, 2008–2011.

Table S5: Values of the validation metrics used for the predictive maps of the prevalence of anaemia and of anaemia severity classes in school-aged children in Burundi, 2008–2011.

Prevalence of anaemia	Mean prediction error	Absolute prediction error
2008	-0.003	0.222
2009	-0.005	0.112
2010	-0.164	0.184
2011	0.027	0.104
Prevalence of low-severity anaemia		
2008	0.063	0.232
2009	0.074	0.120
2010	0.086	0.146
2011	0.052	0.220
Prevalence of moderate/high-severity anaemia		
2008	0.122	0.142
2009	-0.009	0.107
2010	0.006	0.111
2011	0.021	0.046

Figures:

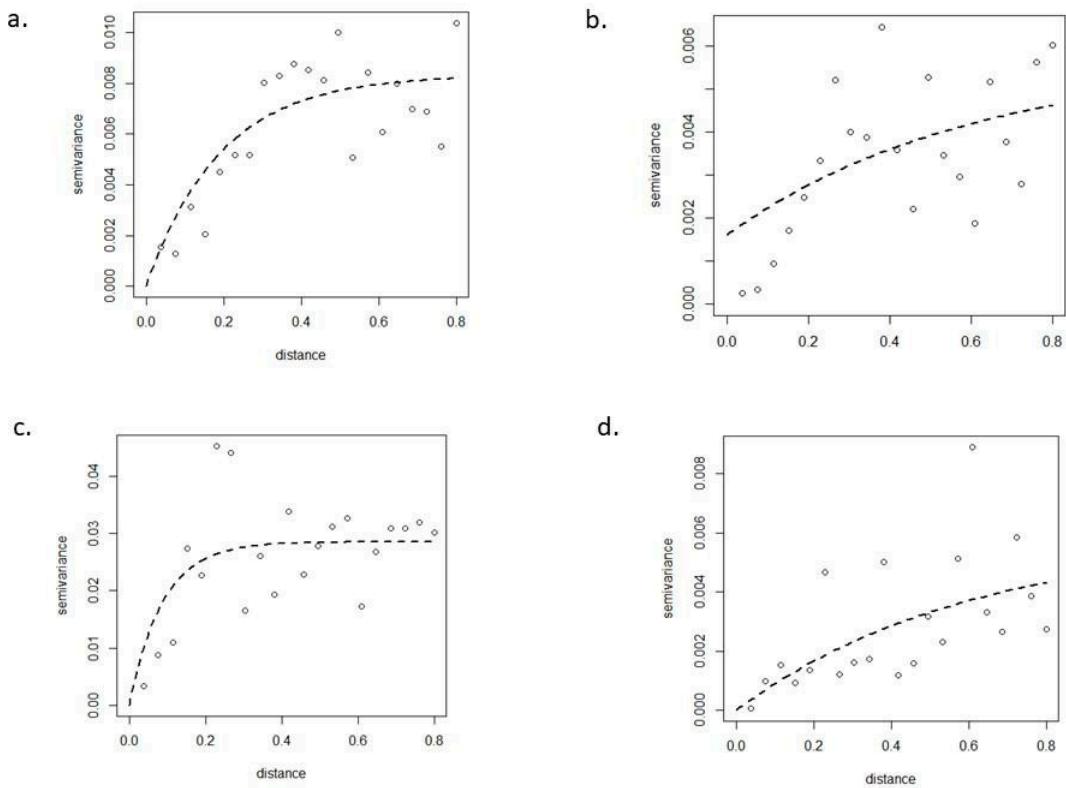

Semivariograms and maps for the standard deviation of the prevalence of anaemia and of anaemia severity in school-aged children in Burundi, 2008–2011, and tables with the predicted number of school-aged children with anaemia or in anaemia severity classes.

Figure S1: Semivariograms for the prevalence of anaemia in Burundi, 2008–2011

The y-axis represents the semivariance and the x-axis the distance (in decimal degrees). **(a)** 2008, **(b)** 2009, **(c)** 2010, **(d)** 2011.

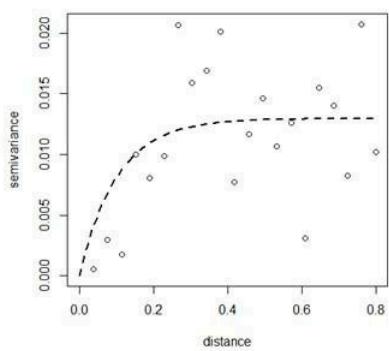

Figure S2: Semivariograms for the prevalence of low-severity anaemia in Burundi, 2008–2011.

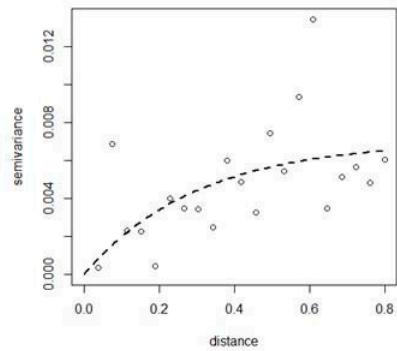

The y-axis represents the semivariance and the x-axis the distance (in decimal degrees). **(a)** 2008, **(b)** 2009, **(c)** 2010, **(d)** 2011.

Figure S3: Semivariograms for the prevalence of moderate/high-severity anaemia in Burundi, 2008–2011.

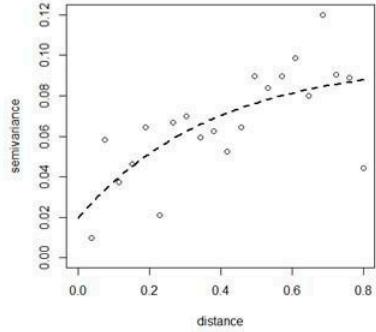

a.

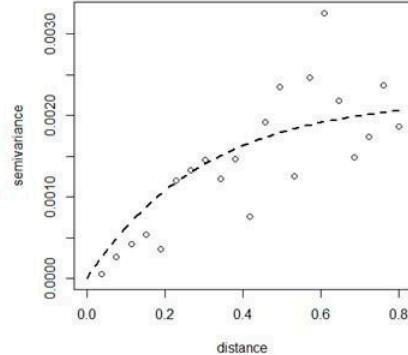

b.

c.

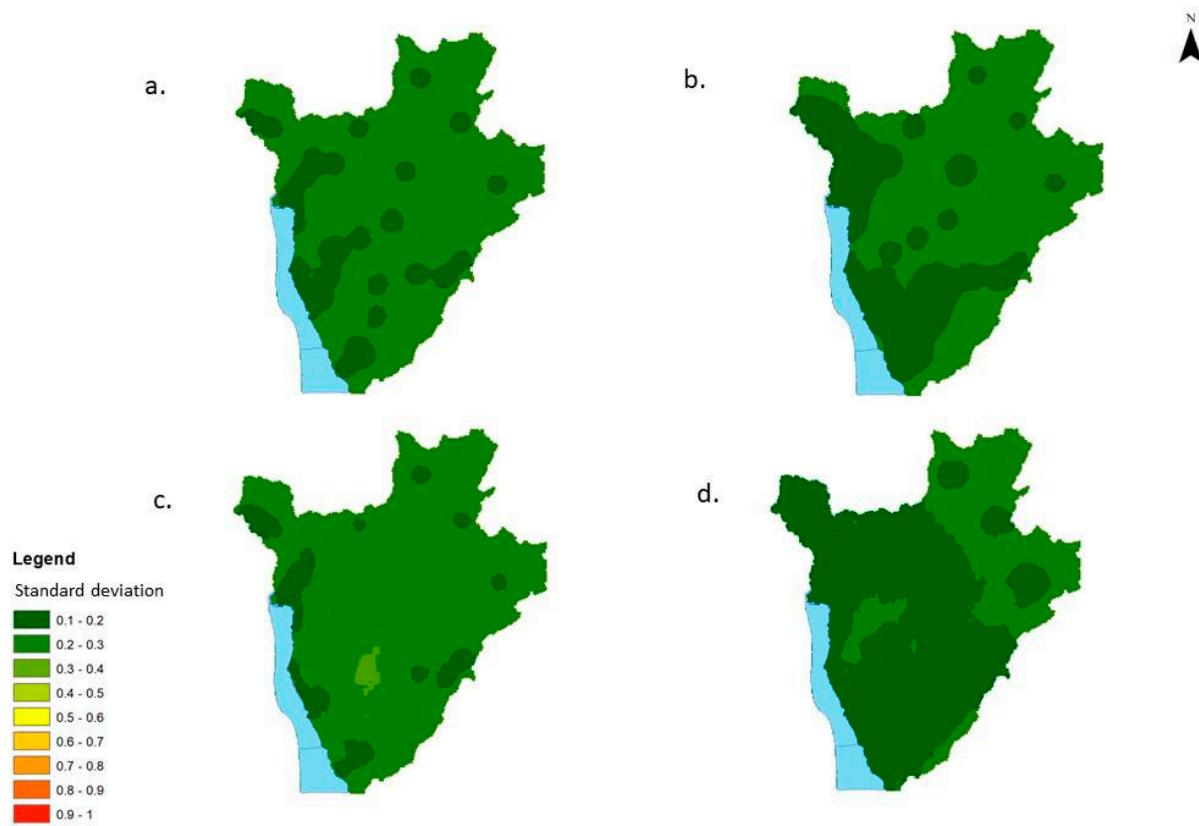

d.

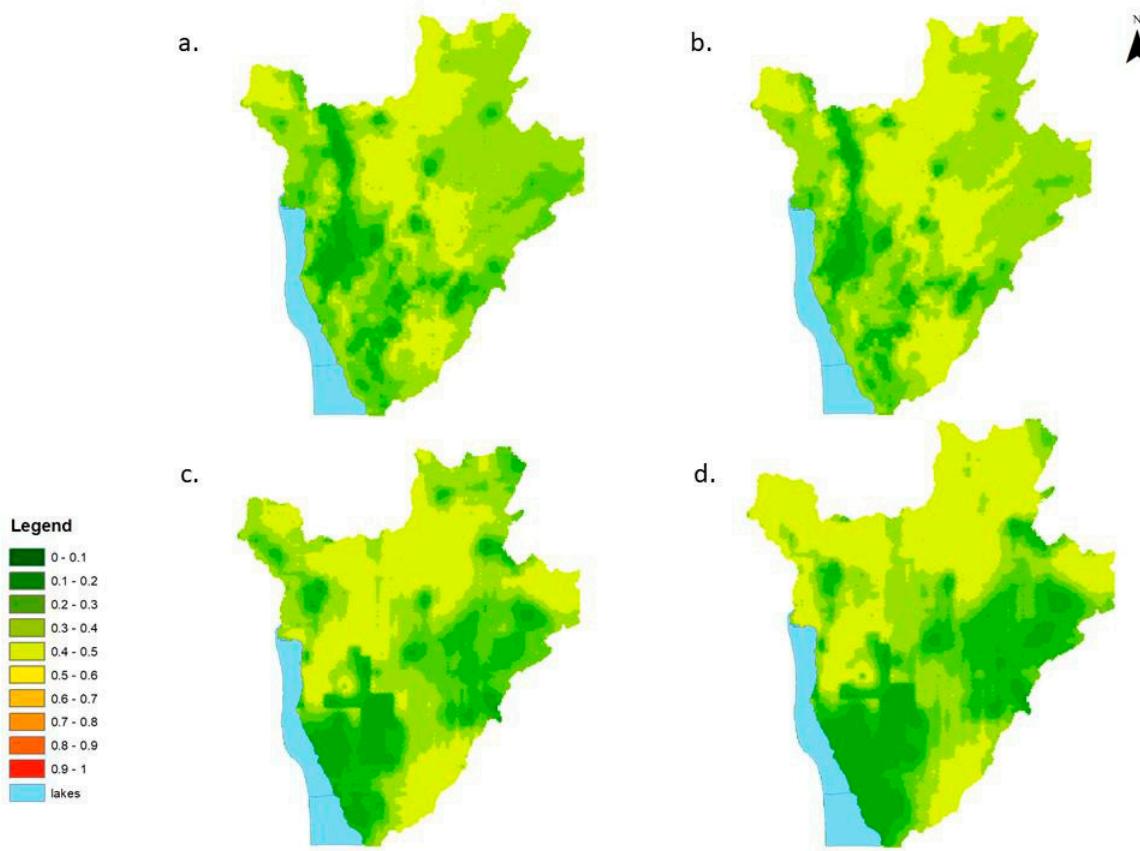

The y-axis represents the semivariance and the x-axis the distance (in decimal degrees). **(a)** 2008, **(b)** 2009, **(c)** 2010, **(d)** 2011.

Figure S4: Standard deviation maps of anaemia prevalence per year in Burundi, 2008–2011.

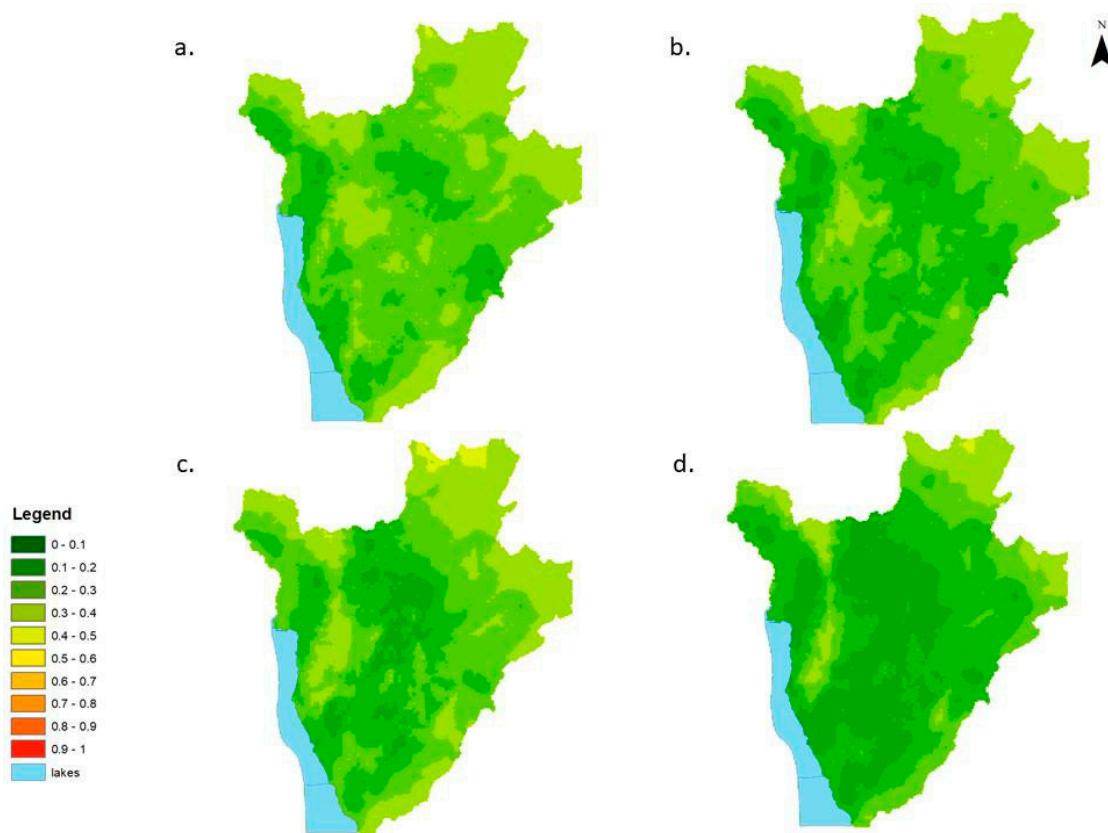

The intensity of the colour represents the magnitude of the standard deviation (see accompanying legend) for the proportion of school-aged children with anaemia (see Table 1 of main text for classification of anaemia according to the World Health Organization [1]). The pale blue colour depicts the location Lake Tanganyika. **(a)** 2008, **(b)** 2009, **(c)** 2010, **(d)** 2011.

Figure S5: Standard deviation maps for the prevalence of low-severity anaemia per year in Burundi, 2008–2011.

The intensity of the colour represents the magnitude of the standard deviation (see accompanying legend) for the proportion of school-aged children with low-severity anaemia (see Table 1 of main text for classification of anaemia and anaemia severity categories according to the World Health Organization [1]). The pale blue colour depicts the location of Lake Tanganyika. **(a)** 2008, **(b)** 2009, **(c)** 2010, **(d)** 2011.

Figure S6: Standard deviation maps for the prevalence of moderate/high-severity anaemia per year in Burundi, 2008–2011.

The intensity of the colour represents the magnitude of the standard deviation (see accompanying legend) for the proportion of school-aged children with moderate- and high-severity anaemia (see Table 1 of main text for classification of anaemia and anaemia severity categories according to the World Health Organization [1]). The pale blue colour depicts the location of Lake Tanganyika. **(a)** 2008, **(b)** 2009, **(c)** 2010, **(d)** 2011.
