

Figure S1. Effect of nitrate on shoot and root of rice seedlings. Length of shoot and primary root were assayed 7 days from the start of rice seedlings incubation in nitrate solutions. **a** Nitrate dose-response curve for shoot length. **b** Nitrate dose-response curve for primary root length. Values with the same letter do not differ statistically at the 5% level by Duncan test. Data are mean \pm standard error of three separate experiments, with five replicates of 10 seedlings each.

Table S1. Primers sequences used for real-time PCR

Name	Primer sequences	
	Forward	Reverse
