

Figure S1. Linear mixed effect model effect plots of the two measures of fuel moisture content used in this study plotted against soil dryness index (SDI) broken down by wet and dry *Eucalyptus* forest types. **a).** Log gravimetric litter (c. 1-hour fuels) FFMC % versus SDI by forest type; and **b)** percentage gravimetric fuel moisture stick (c. 10-hour fuels) moisture content (% FMC) versus SDI by forest type.
