Smart Materials and Structures for Vehicle Applications

Guest Editor:

Prof. Dr. Marcelo Dapino

NSFI/UCRC on Smart Vehicle Concepts, Department of Mechanical & Aerospace Engineering, The Ohio State University, E307 Scott Laboratory, 201 West 19th Avenue, Columbus, OH 43210, USA

Deadline for manuscript submissions: closed (20 October 2023)

Message from the Guest Editor

Dear Colleagues,

This Special Issue deals with the development of adaptive systems and structures for use in vehicles, defined broadly as vehicles for ground or air transportation. Smart materials can greatly accelerate the development of multifunctional systems through the integration of actuators, sensors, and stiffness-tunable components to achieve structures that autonomously or semi-autonomously adapt to changing external conditions.

This Special Issue seeks to attract original works in these areas that may focus on one or more aspects of novel smart materials, control strategies for adaptive structures, new actuators and sensors, advanced manufacturing approaches for smart structures, and innovative designs of components and systems, with the overall objective of developing adaptive structures that can contribute to the widespread transition from fossil-fuel-based transportation to EVs, air taxis, and other emerging applications in the areas of ground and air vehicles.

Specialsue

Prof. Dr. Marcelo Dapino *Guest Editor*
