Message from the Guest Editor

Dear Colleagues,

This Special Issue is focused on the behavioral dimensions of operations management, i.e., behavioral factors or forces that influence firm's operations management and determines its performance significantly. We would like to broaden the concept of "behavioral" as encompassing such concepts or features as human factors, subjective decision-making, managers' characteristics, intangible attributes like capabilities, skills, know-hows, expertise, and experiences, relational variables like trust, affinity, and psychological traits, cultural aspects including norms and belief systems, and organizing principles, and so forth.

We are looking forward to receiving many submissions from scholars, who are interested in this exciting research area in operations management.

Prof. Dr. Bowon Kim
