Message from the Guest Editors

Dear Colleagues,

Sustainable agricultural production is expected to effectively manage natural resources to produce a sufficient amount of nutritionally valuable food, while maximizing the preservation of biodiversity and environmental quality and ensuring economic sustainability. However, in addition to ensuring a balance in food production and environmental protection, many challenges of agricultural production are also related to increasingly pronounced climate change.

Sustainable and innovative agricultural practices in the production of vegetables, fruits, grapes, ornamental, aromatic, and medicinal plants can increase resource use efficiency, improve adaptability and abiotic/biotic stress tolerance, and enhance soil biodiversity while reducing production inputs.

This Special Issue will cover a various research manuscripts aimed at highlighting various sustainable practices in the production of different horticultural crops and the positive impact on overall sustainability. Therefore, you are welcome to share your scientific achievements and contribute to our common goal of sustainable development of the agricultural system.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
