López-Escudero**

**Dr. Fernando Pérez Porras**

Deadline for manuscript  
submissions:

**closed (10 April 2024)**

### **Message from the Guest Editors**

New satellite constellations (Sentinel), cloud computing, low-cost sensors, Internet of Things, big data, and "machine learning" and artificial intelligence are expected to be fundamental in various disciplines of plant pathology and the decision making that will drive integrated pest management in the coming years. A pathosystem is represented by the "disease triangle"; that is, disease requires the interaction of a susceptible host, a virulent pathogen, and a favorable environment. In this context, "Precision plant pathology" is a set of techniques aimed at optimizing the management of diseases based on the quantification of their spatial and temporal variability. These techniques seek to reduce costs and improve production and sustainability by creating risk prediction algorithms and models for the main diseases and adapting them to specific conditions. The four following areas of research are proposed: (1) visualization and statistical analysis of disease data using R and Python; (2) disease modeling using machine learning techniques and fuzzy logic; (3) automatic plant disease diagnosis using deep learning; and (4) remote and proximal sensing for early plant disease detection.

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, cross-disciplinary and scholarly journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. We invite submissions from authors according to the aims and scope of the journal described in more detail on this page. *Agriculture* is published in an open access format – articles are published on the journal's website immediately after acceptance, giving the scientific community and the public unlimited and free access to the content.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
