Message from the Guest Editors

Dear Colleagues,

Herbicide resistance is one of the most serious threats to modern agriculture, causing negative economic and ecological consequences. Under a climate-change scenario in some countries, frequent use of herbicides has led to the evolution of herbicide resistance in species considered as rare in other areas. Moreover, herbicide resistance evolved in several non-agricultural weeds, e.g., along railways, roadsides, turfgrass, etc. This Special Issue aims to describe cases of herbicide resistance in rare and environmental weeds and their management. Specifically of interest are cases of new herbicide-resistant species, fitness and the competitive pressure of herbicide-resistant weeds in non-agricultural areas, genetic and biochemical background of herbicide resistance, and management strategies to prevent and/or control resistant biotypes.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
