Bacterial Lipids and Mechanisms Associated with Bacterial Resistance

Guest Editors:

Dr. Luminita Duma
CNRS, University of Technology of Compiegne, 60203 Compiegne, France

Dr. Yannick Rossez
Faculté des Sciences et Technologies, UMR 8576 CNRS, Unité de Glycobiologie Structurale et Fonctionnelle, Cité Scientifique - Bât. C9, 59655 Villeneuve d'Ascq, France

Deadline for manuscript submissions:
closed (31 March 2022)

Message from the Guest Editors

Dear Colleagues,

Bacterial lipid membranes are promising targets to fight antimicrobial resistance. A deep understanding of the membrane architecture is fundamental for the development of new efficient antimicrobial strategies. Emerging disciplines like lipidomics are extremely powerful, as they provide knowledge of the bacterial lipid composition and therefore could revitalize this long-standing area of research.

The goal of this Special Issue is to bring together current views, new insights, and cutting-edge research on the discovery and biological roles of bacterial lipids associated with any bacterial resistance mechanisms. These include biofilm formation, antibiotic resistance, stress response, or immune evasion mechanisms.

We look forward to your contribution.

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciples are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.
Journal Rank: JCR - Q1 (Infectious Diseases) / CiteScore - Q1 (General Pharmacology, Toxicology and Pharmaceutics)
