Message from the Guest Editors

Dear Colleagues,

The development of remediation technologies is critical to mitigate ecological and human health impacts from environmental pollution. There is a strong demand for cost-effective and sustainable technologies for remediation. For this Special Issue, we invite authors to contribute original research as well as review articles on recent advances made on innovative and sustainable remediation technologies in water, soil, sediment, and air pollution. Potential areas include, but are not limited to:

Soil remediation
Sediment remediation
Phytoremediation
Bioremediation
Ecological restoration
Water treatment
Wastewater treatment
Stormwater management
Natural and constructed wetlands
Ambient air quality management
Greenhouse gases control
Indoor air quality management and control

Author Benefits

Open Access, free for readers, with article processing charges (APC) paid by authors or

institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPPlus, (SciFinder, and other databases.

researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal *Applied Sciences* has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.
