# **Atmospheric Metal Pollution**

Guest Editors:

## Prof. Dr. Xinbin Feng

State Key Laboratory of Environmental Geochemistry (SKLEG), Institute of Geochemistry, Chinese Academy of Sciences, Guiyang 550081, China

## Prof. Dr. Jerry Lin

Center for Advances on Water and Air Quality, Lamar University, Beaumont, TX 77710-0088, USA

Deadline for manuscript submissions:

closed (31 July 2018)

# **Message from the Guest Editors**

Dear Colleagues,

Toxic metals can be transported in the atmosphere as gas or/and fine particulates over long distances, causing adverse impacts to both terrestrial and aquatic environments in remote areas after depositing to the Earth's surface. Coal combustion, metal smelting and other human activities release a large amount of toxic metals into the atmosphere. Understanding the sources of atmospheric metal pollution and transport and deposition pathways are crucial to understanding the environmental impacts of toxic metal pollution on ecosystems.

This Special Issue will cover all aspects of atmospheric metal pollution issues, such as the emission inventory of toxic metals to the atmosphere, the speciation and size distributions of toxic metals in the atmosphere, the isotopic compositions of metals in airborne particulate matters, the source attributions of toxic metals in the atmosphere, as well as local-, regional- and global-scale transport modelling of toxic metals in the atmosphere.

# **Message from the Editor-in-Chief**

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases.

Journal Rank: CiteScore - Q2 (Environmental Science (miscellaneous))
