Message from the Guest Editors

Dear Colleagues,

The current Special Issue, “Advances in Complex Analysis and Geometric Function Theory with Applications”, aims to publish new and modern results in the field of the theory of functions of a complex variable, and the theory of univalent and multivalent functions. The presentation of results obtained using any other techniques which can be applied in the field of complex analysis and its applications is welcome. We do hope that the distinctive aspects of the issue will bring the reader close to the subject of current research and leave the way open for a more direct and less ambivalent approach to the topic.

We look forward to your contributions to this Special Issue.
