### Message from the Guest Editors

To elucidate the pathophysiological mechanisms underlying schizophrenia, develop more effective treatments with minimal side effects, and create services tailored towards the unique needs of patients, the field must incorporate data derived from studies using diverse research methods. We have therefore launched this special issue as a forum to publish studies from researchers employing a wide range of research methods and technologies to study schizophrenia. We welcome original paper, review, or meta-analysis based on animal and human studies. We will consider papers reporting observational, clinical trial, genetics, imaging, computational, health services research, ecological and in vitro data.

Deadline for manuscript  
submissions:

**closed (28 November 2021)**

an Open Access Journal by MDPI
