Deadline for manuscript
submissions:

31 January 2025

Message from the Guest Editors

We want to provide space in this Special Issue for new theoretical and empirical personality models and personality disorder concepts. In addition, the first psychological tests for the assessment of personality disorder traits according to the ICD-11 have already been presented. In particular, questions arise as to how, for example, dissocial, narcissistic, histrionic or psychopathic personality traits can be reflected in the ICD-11 model. Of course, manuscripts do not only have to deal with the ICD-11, but may also focus on competing or alternative personality models. Special attention will be given to specific settings (e.g., prison, sexual and violent offender treatment, recidivism prognosis, forensic and psychiatric institutions, aftercare outpatient clinics, etc.).

We welcome creative and new (critical and systematic reviews, qualitative and quantitative) research works on the above-mentioned topics.

personality traits
personality disorders ICD-11 and DSM5
borderline personality disorder
antisocial disorder
psychopathy
treatment of personality disorders
assessment of personality (disorders)
