### Message from the Guest Editors

Resiliency has become an important focus over the years in understanding how individuals withstand and adapt to hardships, including various traumas experienced throughout the life course. In particular, understanding the factors that contribute to resiliency in older adulthood is especially relevant as we experience worldwide unprecedented population growth of older adults. Elements of resiliency in older adults, especially during a global pandemic, with a focus on the implications for individuals, families, health systems, and public health.

As such, this Special Issue aims at advancing the literature on aging and resiliency. Therefore, we welcome theoretical and empirical contributions that expand knowledge on resiliency in older adults, including resiliency during the COVID-19 crisis. For more information, please visit Special Issue "**Aging and Resiliency**"
