Pancreatic Cancer: Pathomechanism, Diagnostics and Novel Treatment Options

Guest Editors:

Prof. Dr. Konstantinos Dimas
Department of Pharmacology, School of Medicine, School of Health Sciences, University of Thessaly, Larisa, Greece

Dr. Dimitrios E. Magouliotis
Department of Cardiothoracic Surgery/Department of Surgery, University of Thessaly, Biopolis, 41 110 Larissa, Greece

Deadline for manuscript submissions:
30 September 2024

Message from the Guest Editors

Dear Colleagues,

Pancreatic cancer (PC) represents one of the leading causes of cancer-related death. Despite the great research efforts, the PC-associated mortality continues to increase. Furthermore, PC is characterized by high clonal heterogeneity, and resistance to chemotherapy and radiotherapy. In addition, it is commonly diagnosed at an advanced stage, when treatment options are limited. Consequently, it is critical to find new diagnostic tools and therapeutic strategies that can be more efficient and accurate. In this context, we call all surgeons, physicians, and professionals from all the associated disciplines involved in the diagnostic and curative research and pathway of patients with PC (basic and translational science researchers, oncologists, surgeons, anesthesiologists, radiologists, intensivists, oncologists, nurses, nutritionists, etc.) to contribute to this Special Issue. Our vision is to provide the best currently available evidence on this important topic, providing all the necessary information to researchers and clinicians on core concepts at the forefront of PC research.

- pancreatic cancer
- chemotherapy
- radiotherapy
- immunotherapy
- biomarkers

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to Biomedicines, be it original research, review articles, or developing Special Issues of current key topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.
Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q2 (*Medicine (miscellaneous)*)
