Message from the Guest Editor

Dear Colleagues,

Understanding the cellular and molecular processes underlying the origin and progression of brain tumors, as well as the mechanisms of resistance to treatment and metastasis, is crucial for the development of better diagnostic tools and molecularly targeted innovative therapies. Despite important advances made in brain tumor biology over recent years, prognosis remains dismal, and survivors suffer from long-term sequelae of cytotoxic chemotherapy, radiotherapy, and surgical interventions. In this Special Issue of *Brain Sciences*, the current state of knowledge on the biological basis of brain tumor types including gliomas, medulloblastoma, and ependymomas will be addressed, and the potential applications of this knowledge for the development of novel diagnostic and therapeutic strategies will be presented.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, PsycInfo, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 1.9 days (median values for papers published in this journal in the first half of 2025).
