Message from the Guest Editor

Dear Colleagues,

Most neuropsychological theories agree that the brain integrates offline and online representation of one's own body. Moreover, these representations may reflect an innate structure that may arise from the integration of somatic sensory and motor signals within the areas of the brain that control the body. However, the neural systems that provide perceptual awareness of one's own body are very unclear. This Special Issue will focus on the role of short- and long-term sensorimotor inputs and their output effects on body awareness. We encourage clinical and cognitive researchers to submit papers that discuss the role of the body in the brain plasticity can occur in health and in various clinical disorders.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, CAPus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2023).
