Neurobiological Trajectories of Psychological Trauma—Implications for Posttraumatic Stress Disorder (PTSD)

Guest Editors:

Dr. Agorastos Agorastos

Dr. Nikolaos P. Daskalakis

Prof. Dr. Panagiota Pervanidou

Deadline for manuscript submissions:

closed (25 January 2020)

Message from the Guest Editors

Traumatic stress exposure may alter neuroendocrine responses to stress, triggering a health-related risk cascade with persistent structural and functional neuropsychobiological changes and mediate cumulative health risk leading to increased physical and mental morbidity and all-cause mortality in later life.

This Special Issue aims to highlight and review recent advances from human and animal research on neurobiological allostatic trajectories exerting the enduring adverse effects of traumatic stress and posttraumatic stress disorder (PTSD) in later life and identify factors that explain individual variation in vulnerability or resilience. Topics of interest include but are not limited to: HPA-axis, autonomic nervous system, genetics/epigenetics, novel biomarkers, neuroimmunology, neurocircuitry/imaging and neuroendocrinology.

Understanding the pathways susceptible to disruption following traumatic stress exposure could provide new insights into the pathophysiological trajectories linking traumatic stress to systems' maladjustment and human disease in PTSD.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYNDEX, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2023).
