

## BIM Uptake and Adoption: New Perspectives

Guest Editors:

**Prof. Dr. Jason Underwood**

School of Science, Engineering  
and Environment, University of  
Salford, Salford M5 4WT, UK

**Prof. Dr. Ümit Işıkdag**

Department of Informatics,  
Mimar Sinan Fine Arts University,  
Istanbul 34427, Turkey

**Dr. Alan Hore**

Retired Head of Quantity  
Surveying, Technological  
University Dublin, D07 EWW4  
Dublin, Ireland

Deadline for manuscript  
submissions:

**1 November 2024**

### Message from the Guest Editors

Building Information Modelling (BIM) has emerged as a buzz-word that defines both an information sharing approach and an information management strategy for the design, construction, and operations of complex built asset projects. The uptake of technologies and information management methodologies introduced through BIM has not been seamless or easy for the industry. For many years, both academia and industry have worked to establish methods that would result in the most beneficial and effective outcomes while implementing a successful information management strategy, as introduced by BIM.

The aim of this Special Issue is to provide up-to-date research results regarding the use, uptake, and adoption of BIM in different fields and for different processes in the construction and wider built environment sectors.

## Editor-in-Chief

**Prof. Dr. David Arditi**

Construction Engineering and  
Management Program,  
Department of Civil,  
Architectural, and Environmental  
Engineering, Illinois Institute of  
Technology, 3201 South  
Dearborn Street, Chicago, IL  
60616, USA

## Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (*Architecture*)
