Message from the Collection Editors

Dear Colleagues,

With over 700,000 deaths world-wide annually, colorectal cancer remains a large societal burden. Our knowledge of the underlying biology of colorectal tumor formation is impressive, but still, we are not able to efficiently fight this disease. Recent insights are that we should not only focus on biological processes that take place in the tumor cell itself, steered by both genetic and epigenetic events, but also on the response of the environment. This Topic Collection aims to focus on that environmental interaction and its steering processes, and on the mechanisms involved in the early and later steps of colorectal cancer development. Finally, we will discuss the conditions that may lead to a better clinical approach to colorectal cancer.

We very much look forward to your contributions.

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
