Deadline for manuscript
submissions:

closed (20 October 2022)

Message from the Guest Editor

Components of the innate and adaptive immune system critically mediate, but also regulate inflammation in different forms of glomerulonephritis. We do need this information to develop new therapeutic strategies to fight disease since current immunosuppressive protocols are still associated with serious short and long-term side effects such as infection, cancer and diabetes which all together increase mortality in this patient population.

The primary focus of this of this topic will be reviews and research articles, which explore immune mechanisms in various glomerulonephritis entities and current as well as novel immune-modulating/inhibiting strategies in the treatment of glomerulonephritis.

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPLus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
