Message from the Guest Editor

Dear Colleagues,

Cell adhesion molecules are fundamental regulators of the structure and function of most tissues and organs. Their numerous physiological roles have expanded over recent decades to include the regulation of barrier function, polarity, cell-cell and cell-matrix communication, neural transmission, stem cell renewal, cell division and immune function to name but a few. This Special Issue of *Cells* will advance our understanding of the upstream regulators and downstream targets of cell adhesion molecules, and the cellular mechanisms allowing them to act as active drivers of various physiological and pathophysiological processes. Original contributions are welcome from authors actively engaged in the fields of cell-cell adhesion, cell-matrix adhesion and leukocyte adhesion, as well as from authors interested in emerging adhesion-independent signaling events associated with cell adhesion molecules. All models of study and all disease states will be considered, including systems biology approaches that provide new insight into the fundamental regulation of adhesion signaling.

Dr. Ann Hopkins

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
