## Autophagy in Age-Related Human Diseases

Guest Editor:

**Prof. Dr. Tassula Proikas-Cezanne**

Department of Molecular Biology,  
Interfaculty Institute of Cell  
Biology, Eberhard Karls  
University Tuebingen, Tuebingen,  
Germany

Deadline for manuscript  
submissions:

**closed (31 December 2018)**

### Message from the Guest Editor

Dear Colleagues,

Increasingly, the process of autophagy (“self-eating”) is attracting tremendous research efforts. Exciting new data are shedding light on the molecular details of the process of autophagy and its perturbation in human diseases. Moreover, it is becoming evident that autophagy activity and capacity decrease during the aging process, giving rise to the onset of a great variety of age-related diseases. Strikingly, autophagy is also essential to the development of certain diseases (e.g. tumor progression). Hence, the modulation of autophagy is regarded as a new therapeutic opportunity for the future treatment of many pathological conditions. Further, targeting autophagy during the aging process may in fact prove to effectively prevent the onset of age-related human diseases. However, specific autophagy modulators have not yet been developed and tested.

This special issue aims to summarize the current knowledge on the role of autophagy in the process of aging and in age-related human diseases such as neurodegeneration and cancer. We look forward to your contributions.

Prof. Dr. Tassula Proikas-Ce

## Editors-in-Chief

### **Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

### **Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
